EDUCATION

Frontend Developer Program
Hyper Island Yrkeshögskolan
Stockholm, Sweden | Aug/2022 - Mar/2024

Bachelor of Computer Software Engineering
Bahar Institute of Higher Education
Mashhad, Iran | Sept/2008-May/2011

Summary

- Frontend Developer with 5 years of professional experience in both a fast-paced startup and established scale-up environments.
- Having a deep understanding of React and Vue, and good at picking up new technologies.
- Specialising in crafting and maintaining innovative and user-friendly web applications.
- I excel in finding efficient solutions through collaboration and implementing new features sharply.

WORK EXPERIENCE

Freelancer

Mashhad, Iran — Apr 2024 - now

Building a full-stack AI-powered language learning platform featuring CEFR-based content personalization (A1–C2), spaced repetition system (SRS), placement test engine, and subscription-tier access control — with 5,500+ audio/image assets served via Cloudinary CDN.
Implementing AI-driven CEFR level detection (A1–C2) with 4 inference methods: placement test, manual selection, performance statistics, and default fallback.
Designing 4 backend microservices for user level management, card classification, SRS filtering, and subscription-tier access control (Free/Premium).
Integrating Cloudinary CDN to serve 5,500+ audio/image assets across Goethe Institute vocabulary, lessons, and placement test modules.
Building real-time content filtering across 5 exercise types (Flashcards, Typing, Listening, Fill-in-Blank, Sentence Puzzle) with personalized difficulty based on learner proficiency.
In addition to full-stack and AI-driven applications, I have practical experience building WordPress and WooCommerce e-commerce websites. One example is the Debasun online store, developed for a packaging company to present products clearly and collect customer inquiries in an organized way.

Frontend Developer

Yehego AB.
Stockholm, Sweden — Sept/2023 - Mar/2024

- Redesigned and developed a travel booking application for hotels, trains and flights using **Figma** and **React** including:
  - UI with a progress bar for easy navigation between booking steps using **Redux** for **state management**.
  - Search and filter functionalities for hotel selection (map, calendar, room availability, price) and transportation options (timetables, seat availability):
    - Integrated travel data (hotels, flights, trains) via 3rd party **REST API** and displayed the data conditionally on the frontend dashboard.
    - Reduced user waiting time for search results by using on-demand data loading.
    - Integrated Google Maps API to optimise hotel search experience.
  - Responsive design Implementation using **SCSS, Flexbox** and **Grid system** for the entire application and built:
    - Multi-layer menu sidebar for efficient navigation.
    - Dashboard for user booking info, ordering form and payment page.
- Led design and development tasks, organised work with stakeholders and guided a developer in an **agile** development environment.

Frontend developer

Mahna GostarAria Co.
Mashhad, Iran — Nov/2018 - Jul/2022

- Collaborated with the web development team to design UI for client websites using HTML, JavaScript, and React, resulting in a 20% improvement in user engagement and an enhanced overall user experience.
- Crafted responsive designs for mobile applications, producing a 30% increase in user engagement.
- Conducted testing, identifying and resolving technical issues, resulting in a 20% improvement in SEO rankings and accessibility.
- Engineered reusable code modules, streamlining future development processes and enhancing overall code efficiency.
- Enforced comprehensive quality assurance measures to ensure a bug-free and seamless user experience on the website.
- Enhanced website features, driving a 25% increase in user satisfaction metrics.

IT specialist

Mashhad Municipality
Mashhad, Iran — Sept/2013 - Apr/2018

- Installed and managed network equipment for 100+ users, ensuring optimal functionality.
- Handled servers and hardware, minimizing downtime by 15% through updates and backups.
- Enhanced system performance with strategic updates, reducing downtime by 15%.
- Implemented security protocols, boosting IT infrastructure reliability by 25%.
